

Veeam support for Microsoft Windows Server 2016

Veeam® offers innovative and practical solutions to help IT professionals better manage their virtual infrastructures. We continually enhance our products, including ensuring compatibility for new operating system and hypervisor releases. This document provides information about compatibility of Veeam products with Microsoft Windows Server 2016.

Our goal is to provide compatibility with current platforms as well as support new platform releases as timely as possible, so that when our customers have completed their planning and testing and are prepared to upgrade to a new platform release, our products are also ready.

Note: Timing and content of future releases are subject to change without notice.

Product	Version	Notes
